

The Journey from Innovation to Application

A new ISTH forum to accelerate translation in thrombosis and haemostasis

This new ISTH format is designed to **connect the full innovation pathway** — from discovery and scientific insight to regulation, development, and patient benefit. By bringing together academic researchers, regulatory experts, clinicians, and industry innovators, the session promotes **scientific storytelling**, **translational roadmaps**, and **cross-sector dialogue** around novel therapies, diagnostics, and devices in haemostasis. Its ambition is not only to showcase advances, but also to **identify prerequisites, ethical and regulatory challenges**, and collaborative solutions that speed innovation toward clinical application. **An innovative format leading to a idea debate / forum**

ACADEMIA /

SESSION STRUCTURE

CORE OBJECTIVES

Share discovery-to-development experiences through scientific storytelling

Clarify translational roadmaps, prerequisites, ethical and regulatory issues

Foster dialogue between academia, regulators, clinicians, and industry

Inspire PhD students and postdoctoral fellows through diverse career paths

WHAT SPEAKERS AND THE ROUND TABLE SHOULD ADDRESS

Trajectories from fundamental research to translational development

Personal drivers behind innovation journeys

Challenges, issues, and opportunities

How multi-stakeholder collaboration accelerates translational research and improves patient care

High value , multivoice , discussion into ideas debate / forum on how partnership ecosystems accelerate innovation in thrombosis and haemostasis
